Position Statement

Appropriate Use of Cesarean Section

Background

Despite reliable evidence to the contrary, cesarean section rates rise steadily in many countries. Birth by Cesarean section has implications beyond the prevention of maternal and perinatal morbidity and mortality, both for the present and future health of mothers and babies. It appears that the rate of increase of Cesarean section births in some countries is related more to the threat of litigation, to service and social needs, misinformation of women, than to the existence of new and reliable evidence for the need to intervene in the normal birthing process.

Cesarean section can be a lifesaving intervention for mother and baby when vaginal birth is contraindicated. Cesarean section is also associated with increased morbidity and mortality for women and their newborn infants and may impact negatively on a woman's future reproductive health. Unnecessary birth by cesarean section also places extra demands on maternity services and the use of finite health resources.

Position

ICM regards the inappropriate use of Cesarean section, when evidence-based clinical criteria are not met, as a violation of women's reproductive health rights and an avoidable burden on health and social systems.

Therefore ICM:

- Supports the use of evidence based clinical criteria as the basis for performing a cesarean section.

---

1 Association between rates of cesarean section and maternal and neonatal mortality in the 21st century: a worldwide population-based ecological study with longitudinal data.
• Promotes the collection and dissemination of data on the allocation and use of financial and human resources for maternity services.

• Advocates that midwives and other maternity service providers be proactive as advocates for individual women and normal birth and demonstrate accountability for clinical decisions.

• Urges midwives to develop their educational and health promotional role amongst women.

• Works with obstetric colleagues to promote and support normal birth and the appropriate use of caesarean section.

• Encourages the collection and dissemination of data to monitor the ongoing global situation.

**Recommendations**

Member associations are urged to:

• Support midwives to be accountable for their role in promoting vaginal birth and the use of evidence-based criteria for the performance of caesarean section within their countries.

• Encourage the national adoption of evidence-based criteria and standards for the performance of caesarean sections that will result in maximum health gain for women and babies.

• Support midwives in their health education and advocacy roles.

• Monitor and report the outcomes, in terms of intervention and vaginal birth rates, in their countries.
